SUMMARY

Computer Science undergraduate (CGPA 9.72) with hands-on experience building **full-stack applications**, **cloud-native backends**, and **AI/ML systems**, including production tools shipped during a software engineering internship. **1st Place** at HackNUthon 6.0 and **2nd Place** at Breach 2025, backed by strong fundamentals in **data structures**, **algorithms**, and **system design**.

EDUCATION

Pandit Deendayal Energy University

B.Tech in Computer Science and Engineering | CGPA: 9.72 / 10

Gandhinagar, Gujarat

July 2023 – May 2027

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript (ES6+), SQL, C++, Java, C

Backend & Frontend: Node.js, Express.js, FastAPI, Flask, REST, OpenAPI, Serverless, JWT Auth, Next.js, React.js, Angular, Jest

Cloud & DevOps: AWS (Lambda, DynamoDB, S3, CloudFront, IAM), Terraform (IaC), Docker, Jenkins, Git, GitHub, Linux

Databases: PostgreSQL, MySQL, DynamoDB, MongoDB

Data & ML: Pandas, NumPy, Matplotlib, XGBoost, Random Forest, GNNs, API Data Processing, Data Validation, Schema Design

AI & Concepts: LLM Workflows, RAG, DAG Orchestration, MCP, DSA, OOP, DBMS, Operating Systems, System Design

EXPERIENCE

Quicko

Software Engineering Intern

Ahmedabad, Gujarat

May 2026 – June 2026

- Developed and deployed **four production-grade financial tools** live on Quicko's platform: a **PAN Verification Tool** ↗, a **PAN-Aadhaar Link Status Checker** ↗, a **Tax Payment Status Checker** ↗, and an **e-Verify ITR Tool** ↗.
- Designed cloud-native data workflows on **AWS DynamoDB** and built scalable **serverless APIs** with **TypeScript**, **Node.js**, and **AWS Lambda**, using Middy middleware for validation, error handling, and logging.
- Enforced **schema-driven data validation** across services using **OpenAPI Specifications** and **JSON Schemas**, with automated code generation.
- Provisioned infrastructure as code with **Terraform**, enforcing least-privilege access through **AWS IAM** roles and policies.
- Applied **TSyringe** for dependency injection; wrote **Jest** unit/integration tests for reliability.

PROJECTS

FraudShield – AI Fraud Detection ↗ (1st Place, HackNUthon 6.0)

Python, FastAPI, XGBoost, GNN, RAG, Next.js, MongoDB

- Co-built a **real-time fraud detection system** that ranked **1st among 300+ teams** and 1000+ participants at HackNUthon 6.0.
- Designed a **compliance-first pipeline**: every transaction is verified against online-banking regulations before fraud detection, then scored with **XGBoost**, **Random Forest**, and **Linear Regression** (timestamp features, weighted classes) to flag anomalies.
- Added **Graph Neural Networks** to detect complex patterns such as **circular transactions**, producing a **risk score** and routing flagged cases to an admin review queue.
- Built **RAG-based explanations** with compliance reasoning, improving LLM accuracy via structured prompt engineering and better embeddings; served through low-latency **FastAPI** endpoints with a **Next.js** dashboard and **MongoDB**.

TrustChain – AI + Blockchain Fraud Prevention ↗ (2nd Place, Breach 2025)

Python, FastAPI, DeepFace, Solidity, Next.js, MongoDB

- Built a fraud-prevention platform combining **biometric face-recognition authentication** (**OpenCV**, **DeepFace**), **ML fraud detection**, and **blockchain** audit trails.
- Trained a **Random Forest** classifier on a public **Ethereum transactions** dataset (Kaggle) to flag fraudulent transactions.
- Secured records with immutable **Solidity** smart contracts (**ThirdWeb**, **MetaMask**) on a **Next.js**, **Node.js**, **FastAPI** stack.

DriveMesh – Encrypted & Distributed Cloud Storage over GDrive ↗

Python, Flask, Google Drive API, OAuth 2.0

- Built a **Python/Flask** app that pools multiple Google Drive accounts into one **encrypted, distributed storage** layer with a drag-and-drop file manager.
- Engineered a **chunking pipeline** that splits files into 5 MB blocks, encrypts each with **Fernet**, and distributes them **round-robin** across accounts via the **Google Drive API v3**, parallelized with **ThreadPoolExecutor** (up to 5 threads per account).
- Maintained **JSON metadata registries** to reconstruct, delete, or reorganize files, with multi-account **OAuth 2.0** token refresh.

DAGent – AI Workflow Orchestration ↗

Next.js 14, TypeScript, MongoDB, NextAuth, Redux Toolkit

- Built an **AI workflow orchestration platform** that converts natural-language requests into executable **DAG** workflows, running independent tool nodes in **parallel**.
- Integrated **MCP tools** (Drive, Gmail, Contacts) secured with **Google OAuth 2.0** via NextAuth, with auto-refreshing tokens stored in a custom **MongoDB** adapter.
- Designed **Mongoose** schemas for chats, workflow graphs, and credentials.
- Built the interactive dashboard – chat panel, live DAG canvas, log viewer – with **Redux Toolkit** and **Zustand** for state and **Framer Motion**/GSAP for animation.

ACHIEVEMENTS & CERTIFICATIONS

- Earned the **Knight** badge on **LeetCode**; Qualified **JEE Mains**, **JEE Advanced**, and **GATE**; Awarded the **Government of Gujarat Merit Scholarship**.
- Certificate** in Entrepreneurship and Incubation – **NPTEL (IIT Bombay)**
